

ALLIANT STOCKROOM

is the key to integrating a textile rental company's front office with the stockroom. Unlike other systems, activity keyed in the office automatically generates all of the documents required to fill orders with no additional keystrokes - such as work orders, garment pick lists, emblem pick lists and man readable tapes. Billing for filled orders, such as replacements and size changes, is automated as orders are actually filled - no more having to guess when to invoice a customer for a new order! In addition, **Alliant Stockroom** can be configured to track individual garments with bar-code labels and/or RF chips to provide a higher level of tracking for customers.

With **Alliant Stockroom**, a single scan can place a message on the customer's invoice that a garment was mended. What if you don't charge for mending? Even better - your customer now knows you just provided a valuable service free of charge.

FEATURES & BENEFITS AT A GLANCE!

STOCKROOM INTEGRATION

- › Eliminate Double Work
- › Track Order Status
- › Special Instructions for Orders
- › Emblem Pick Lists
- › Man Readable Tapes
- › Automatic Billing

GARMENT TRACKING

ALLIANT STOCKROOM

DETAILED FEATURES & BENEFITS

STOCKROOM INTEGRATION

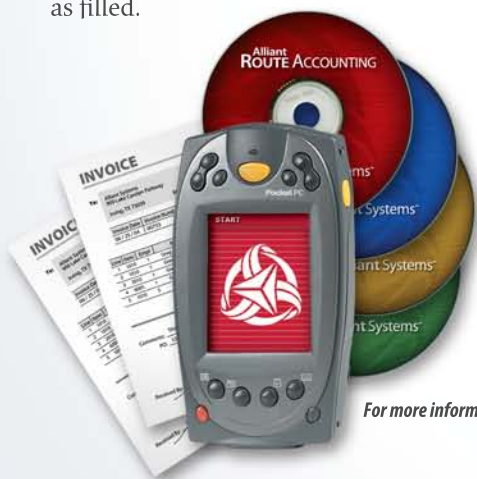

- › **Eliminate Double Work** – Activity keyed in the office automatically generates all of the documents required to fill orders - work orders, garment pick lists, emblem pick lists and man readable tapes.
- › **Track Order Status** – Review orders by customer, reason, route, day, etc.
- › **Special Instructions for Orders** – Have an order that requires special attention or needs to be rushed? Enter a message for stockroom personnel to see.
- › **Emblem Pick Lists** – Store and track emblems and emblem placement required by customer.
- › **Man Readable Tapes** – ID tapes are generated automatically and can be printed by order or by customer.
- › **Automatic Billing** – Activity in the order department automatically integrates with the front office for accurate billing. Orders are invoiced as filled.

GARMENT TRACKING

- › **Track Individual Garments** – Track garments through the rental cycle. Alliant Stockroom stores the date the garment was issued and the number of times it has been laundered and mended.
- › **Customer Reconciliation** – When a customer or an employee quits service, present them with a report that itemizes the garments that should be returned.
- › **Efficiently Handle Exception Garments** – When a wearer quits or requires a size change, the system automatically notifies the operator when the garment is scanned so the garment can be pulled immediately and returned to the stockroom for future use.
- › **Single Scan Transactions** – With a single scan, automate the process of billing for mends and repairs. In addition, a single scan of a garment can generate a replacement order and automatically bill for preparation fees, emblems and other ancillary charges as soon as the order is filled.
- › **Customer Service** – Service personnel can access the system to tell customers which garments were turned in versus those that have not been laundered for a while. In addition, service personnel can mark specific garments for inspection. Subsequently, when those garments are scanned, the operator will be notified will and receive instructions on what to do next.

REPORTING

- › **Garments In Service** – Provide a detailed listing of garments by customer, wearer or SKU. Information displayed includes the date the garment was issued, the last scan date as well as the number of washes and mends.
- › **Garments Scanned** – Provide a list of all garments turned in by a customer by day.
- › **Garments Issued** – View stockroom activity by order type. For example, how many times did you do a size change because you measured the customer wrong (your error) versus a typical size change? How much used stock are you utilizing?
- › **Unreturned Garments** – Provides a list of garments that have not been scanned in a given amount of time. Identify garments that need replacing for the customer.
- › **Use Plain Paper** – All reports designed to print on 8 1/2 x 11 plain, bond paper.
- › **Report Preview** – All reports can be previewed on the screen.
- › **Data Mining** – All data is stored in an ODBC-compliant SQL Server database and can be queried utilizing products such as Crystal Reports.
